molecular medicine: small molecules have a big impact on health.

HMI Public Lecture
7.30 pm
Wednesday 13 April 2005
Emmet LT, Arts Building, TCD.

Dermot Kelleher (TCD)

Molecular medicine, small molecules have a big impact on health.

The Emmet Lecture Theatre is on the main floor of the Arts Building, the building on your right as you enter Trinity from Nassau Street.

Professor Dermot Kelleher is Professor of Clinical Medicine at Trinity College Dublin since 2001. He graduated from TCD in Medicine in 1978 and completed specialist training in Gastroenterology in Dublin. He subsequently received a Fogarty Scholarship for a research fellowship at University of California San Diego. In 1989 he was appointed as a Wellcome Senior Fellow in Clinical Science at Trinity College Dublin and was subsequently appointed as Professor of Clinical Medicine in 2001. Professor Kelleher’s research has focused on the cell biology of immune responses both in terms of basic lymphocyte function and in relationship to mucosal immunology. His research has been published in such journals as Nature Immunology, Journal of Biological Chemistry, Journal of Immunology, Journal of Experimental Medicine, Gastroenterology and Gut and he has also contributed to textbooks on the subjects of inflammatory bowel disease, celiac disease and helicobacter pylori infection. He is a Fellow of the Academy of Medical Sciences, London and of the Royal College of Physicians, London. (Biographical note from http://www.hrb.ie/).
