from molecules to mind

PhD Opportunity – September 2012 (SFI-funded)

Applications are sought from suitably qualified candidates to undertake research designed to assess modulation of glial function in the brain, specifically in relation to neurodegenerative conditions. The successful candidate will have graduated with a first-class or upper second-class honours degree in one of the biological disciplines (eg neuroscience, physiology, biochemistry, immunology) and will join the vibrant research team supervised by Professor Marina Lynch, and the wider Neuroscience community in the Institute of Neuroscience in Trinity College.

Those interested should send a statement of their research experience and interests, a copy of their curriculum vitae, and contact information for 2 or 3 referees to lynchma@tcd.ie before 30th March 2012
