Be Positive About Being 50+

Make a positive contribution to science and society

Volunteer now.

We are interested in finding out about how brain processes, such as memory and attention, are influenced by various aspects of people’s day to day life.

We want to find out about more about how the things we do from day to day affect how we remember as we get older.

We want to develop ways to help people to protect their memory and other aspects of brain function as they get age.

In order to do this, we need volunteers to take part in research.

Our research volunteers are very important to us - if you are interested in hearing more about taking part in our research please fill out our contact form, or contact:
