Training in Child and Adolescent Psychotherapy

M.Sc. Psychoanalytic Psychotherapy - Child and Adolescent
Trinity College Dublin and the Irish Institute of Child and Adolescent Psychotherapy

Open evening on Thursday 16th February at 7pm for presentation on the training and meet with academic faculty and IICAPP training committee members

Room 2041B Arts Building, Trinity College Dublin

This highly respected and well established training has for over 20 years provided the only clinical training in Child and Adolescent Psychoanalytic Psychotherapy in Ireland including a two year infant observation component. This four year part time training leads to an MSc and professional qualification in Child and Adolescent Psychoanalytic Psychotherapy. Graduates are eligible to work with children in a variety of mental health settings.

Child and Adolescent psychoanalytic psychotherapy is a clinical approach to therapeutic work with children, spanning the years from infancy through adolescence. It is rooted in psychoanalytic theory and emphasizes the significance of early childhood experiences and relationships and their impact on the internal world of the child. A wide range of emotional, mental health and relationship difficulties experienced in childhood and adolescence can benefit from this psychotherapy. The training places significant emphasis on experiential learning and the acquisition of specific skills for working with children and adolescents. Upon completion graduates are eligible for accreditation with appropriate professional bodies including Irish Council for Psychotherapy.
