• The aim of this module is to enable you to acquire knowledge of how the main imaging modalities work and how they can be used in diagnosis, staging, and treatment delivery. You will be encouraged to read journal articles around the subject to apply your knowledge to different tumour sites and to extend your knowledge beyond the main modalities and applications.

• At the end of the module you will be able to:
  – Explain the functionality of all imaging modalities
  – Assess the limitations and applications of different imaging modalities
  – Identify organs of the Pelvis and head and neck from cross sectional imaging.
  – Discuss optimal imaging methods for different regions of the body
  – Assess the problems that arise when imaging, in terms of image quality and artefacts.
