Module Code	PYU11E04
Module Name	Physics
ECTS Weighting [2]	5 ECTS
Semester taught	Semester 2
Module Coordinator/s	Prof Stefan Hutzler
Module Learning Outcomes with reference to the Graduate Attributes and how they are developed in discipline	LO1. To introduce the student to the basic physical laws describing thermodynamic processes, heat and heat-transfer, oscillations and waves (including light and sound), electricity and magnetism LO2. To demonstrate the application of these laws and enable the student to apply them to basic, technologically relevant examples LO3. To introduce the student to measurement principles and their application to investigate physical phenomena LO4. To establish good laboratory practice and precise written reporting procedures **Graduate Attributes: levels of attainment** To act responsibly - Introduced To think independently - Introduced To develop continuously - Introduced To communicate effectively - Introduced
Module Content	**Oscillations and Waves** • Oscillator equation of motion, simple harmonic oscillator, damping, properties of waves, wave-equation, travelling and stationary waves, superposition-principle, Huygens principle, diffraction, interference, and polarisation, electromagnetic and sound waves.

[2] TEP Glossary

	Geometric Optics • Mirrors, lenses and prisms, reflection, refraction, polarisation, interference/diffraction, image formation, simple optical systems. **Thermal Physics** • Temperature (including kinetic gas theory), temperature scales, thermometers, thermal expansion, laws of thermodynamics, ideal and real gases, isochoric and isobaric heat capacity, thermodynamic cycles (including clockwise and anti-clockwise Carnot cycle); heat transfer, conduction, convection, radiation. **Electricity and Magnetism** • Introduction to electrostatics, magnetostatics and electromagnetism: electric charge, Coulomb's law, concepts of electrical field and potential, energy, Biot-Savart Law, Ampere's Law, magnetic fields, Lorenz Force, Electromagnetic induction and Faraday's Law, summary of Maxwell equations.
Teaching and Learning Methods	The module is taught using a combination of lectures, laboratories and tutorials. Most module materials (notes, tutorials) are provided in electronic form. Students work in tutorial and laboratory groups, thereby encouraging teamwork and cooperation whereas the research reports and homework are individual.

Assessment Details [3]

Please include the following:

- **Assessment Component**
- **Assessment description**
- **Learning Outcome(s) addressed**
- **% of total**
- **Assessment due date**

Assessment Component	Assessment Description	LO Addressed	% of total	Week due
End of semester exam	exam	1,2	60%	End of semester
Laboratory experiments and write-ups	Marking of write-ups	3,4	40%	Every other week
tutorials	unmarked	2	0	Every week

Reassessment Requirements

Exam only

Contact Hours and Indicative Student WorkloadError! Bookmark not defined.

Contact hours: 52
Independent Study (preparation for course and review of materials):
Independent Study (preparation for assessment, incl. completion of assessment):

Recommended Reading List

University Physics, Young and Freedman, 12th edition

Module Pre-requisite

none

Module Co-requisite

none
