**Module Learning Outcomes** with reference to the Graduate Attributes and how they are developed in discipline

On successful completion of this module, students should be able to:

LO1. Be able to apply engineering knowledge gained in other modules to formulate solutions to multidisciplinary design problems.

LO2. Be able to integrate knowledge, handle complexity and formulate judgements with incomplete or limited information.

LO3. Be able to identify which methods to use to solve complex design challenges.

LO4. Be able to develop empathy for the user/customers who use the design.

LO5. Be able to iterate through many design cycles.

LO6. Have the ability to apply design methods, processes and techniques to unfamiliar, ill-defined problems.

LO7. Develop the skills needed to work as individuals and/or in teams.

LO8. Develop skills in presentation of an idea and solution to potential clients, both verbally and in writing.

LO9. Be able to interpret the requirements from design briefs and formulate and appraise potential solutions. In the case of the design project, this involves the ability to:

- Identify functional and operational requirements
- Identify infrastructural requirements
- Appraise the environmental and social impact of the development
- Identify and appraise potential sites/routes before making selection
- Develop general arrangement drawings, ensuring that the functional requirements are satisfied
- Write a technical specification
- Conduct detailed designs of key operational features
Graduate Attributes: levels of attainment
To act responsibly - Attained
To think independently - Enhanced
To develop continuously - Attained
To communicate effectively - Attained

Module Content
In this module, students will work individually or in teams (depending on class size) on a transport infrastructure design project, typically a Light Rail Line. Students will be given a series of design briefs and are required to develop solutions, critique them and refine them as the project develops.

The aim of the module is to enable the student to use the knowledge gained on the other modules on the programme in an applied way in a design project. Some lectures will be provided by staff and industry professionals sequenced with the required output of the project phases, but most of the timetabled hours will involve the students working on their design assignments in co-operative learning style sessions.

The first part of the module will focus on students delivering a scheme design addressing potential site/routes depending on transport demand, budget, accessibility, benefits etc having consideration for environmental and social impacts.

The second part of the module will involve students preparing designs of detailed operational elements of the scheme. The objective is to develop the student’s design office skills and to challenge the students with realistic problems that force them to make decisions even when faced with limited information. Presentation of the final designs, both verbally and in writing, will be assessed.

Teaching and Learning Methods
Teaching strategies
- Problem based learning
- Cooperative learning
- Individual and group design exercises
- Presentations

### Reassessment Requirements

**Contact Hours and Indicative Student Workload**

- **Contact hours:** 35
- **Independent Study (preparation for course and review of materials):** 45
- **Independent Study (preparation for assessment, incl. completion of assessment):** 45

### Recommended Reading List

Notes are provided

### Module Co-requisite

At least two of CE7T01, CE7T02, CE7T04

### Module Website

No

### Module Approval Date

Approved by

**Academic Start Year**

1st September 2020

**Academic Year of Date**

2020/21
