**Module Learning Outcomes** with reference to the [Graduate Attributes](#) and how they are developed in discipline

1. Design and organize a survey, including estimation of probable errors
2. Carry out reconnaissance of an area to establish best possible methods to be used
3. Perform instrument checks to ensure they meet specifications
4. Carry out basic surveying techniques
5. Map survey coordinates using GIS software
6. Analyse, report and where appropriate distribute the survey errors

**Graduate Attributes: levels of attainment**

To act responsibly - Enhanced
To think independently - Enhanced
To develop continuously - Enhanced
To communicate effectively – Attained

**Module Content**

Engineering surveying is a single semester module that will help you gain a foundation understanding of the principles of surveying, intermediate knowledge of the methods and procedures used on site, and hands-on familiarity with a full range of surveying instruments and equipment.

This module will give students the ability to design and manage surveying projects in a wide range of contexts and environments. Students will gain an appreciation of the importance of accuracy and precision when translating detailed plans when setting out any civil engineering project. This will include addressing the challenges faced for surveyors working in different construction environments, and consider the impact of design changes during project development.

This practical work will be grounded by mathematical theory of analyzing for

---

1. [An Introduction to Module Design](#) from AISHE provides a great deal of information on designing and re-designing modules.
2. [TEP Glossary](#)
possible errors that may occur in both surveying instrumentation and the methods used.

The following topics are covered.
- Linear Measurement
- Levelling
- Angular Measurement
- Totals Stations
- Setting Out
- Horizontal & Vertical Curves
- Global Positional Systems (GPS)
- Mapping and Modelling using mapinfo

Teaching and Learning Methods

During the practical’s the students work in teams to carry out basic engineering tasks that would be encountered in a surveying team. These tasks are designed to enable hands-on work with the range of surveying equipment and accessories covered during the lectures:
- Levels: Level survey
- Theodolites: Theodolite traverse
- Totals Stations: Total station traverse, detail survey
- GPS Survey: Using a GPS to conduct a survey
- GIS assignment

Each practical requires submission of a report containing tabular result, sketch, error reporting, and commentary on the methods used.

Assessment Details

Please include the following:
- Assessment Component
- Assessment description
- Learning Outcome(s) addressed
- % of total
- Assessment due date
