Module Code | MEU44B06
---|---
Module Name | Manufacturing Systems and Project Management
ECTS Weighting | 5 ECTS
Semester taught | Semester 2
Module Coordinator/s | Dr. Shuo Yin and Dr. Kevin O’Kelly

**Module Learning Outcomes with reference to the Graduate Attributes and how they are developed in discipline**

On successful completion of this module, students should be able to:

Learning outcome for Manufacturing Systems
1. describe manufacturing planning and control strategies (e.g. MRP, MRP II, JIT);
2. construct a materials requirement plan from a bill of materials and master schedule using finite and infinite capacity;
3. assess the influence of costs on a plan;
4. link DFM and layout strategies with production planning and control;
5. identify the key differences between product and process layouts;
6. identify and quantify key metrics for creating manufacturing cells;

Learning outcomes for Project Management
7. define objectives and deliverables in a project environment;
8. understand the role of project management in contemporary business practice;
9. write a project proposal including preliminary budgets and project controls;
10. apply planning methods including resource, time and cost planning;
11. understand quantitative tools for risk assessment
12. use graphical methods for presenting project schedules and plans;
13. utilize contemporary techniques and technology for project management;
14. apply module material to a project using MS Project software.

**Graduate Attributes: levels of attainment**
To act responsibly - Not embedded
To think independently - Attained
To develop continuously - Introduced
To communicate effectively - **Not embedded**

<th>Module Content</th>
</tr>
</thead>
<tbody>
<tr>
<td>This module provides a general introduction to operations management of manufacturing systems. It will explore strategies for operating and optimising the production of products in different varieties and volumes with limited resources and in competitive environments. The impacts of design decisions on manufacturing performance and the physical organisation of plants are explored through various DFM and plant layout strategies. Formal project management methods will be introduced reflecting the growing use of continuous improvement through project management.</td>

<th>Teaching and Learning Methods</th>
</tr>
</thead>
<tbody>
<tr>
<td>The module encompasses a diverse range of teaching and learning strategies. The module is taught using a combination of lectures, assignments, and tutorials. The bulk of the module material (notes, tutorials) are provided as handouts. There is a group based tutorial project developing skills in computer-based Project Management.</td>

Reassessment Requirements

Contact Hours and Indicative Student Workload

- Contact hours: 44
- Independent Study (preparation for course and review of materials): 5
- Independent Study (preparation for assessment, incl. completion of assessment): 5

Recommended Reading List

- Production and Operations Management, Heizer and Render, 3rd or later edition, Allyn and Bacon, 2002

Module Pre-requisite
N/A

Module Co-requisite
N/A
