What the students say about our Masters...

“The one-year MSc in Molecular Microbiology has given me the opportunity to hone my skills in the lab and has prepared me for the rigours of undertaking PhD research. The experience has been particularly relevant to the ongoing COVID-19 pandemic; I believe it has given me the experimental and theoretical competencies necessary for working in public health.”

Fergal Hamrock (2019-2020); Kroger lab

“I loved my time in the lab and the opportunity to work alongside fellow researchers. The research was tailored to what I found interesting and enabled me to guide myself through the project with constant reassurance and assistance from my supervisor. The skills I learnt during the masters both professionally and personally has set me up well for my future career.”

Nicole Byrne (2020-2021); Fleming lab

“What the students say about our Masters...

“The Moyne Institute of Preventive Medicine provides a bright, uplifting atmosphere to work in and this MSc course has given me the opportunity to take responsibility for my own learning whilst still having guidance and support during my project. It builds on my own initiative as well as developing my troubleshooting and problem-solving skills. As a starting researcher you can bring new ideas to life and learn to challenge your own thinking.”

Amy-Jayne McDonnell (2020-Present); Martins lab
