Chemistry is a creative and central science, dealing with challenges that span the physical and life sciences. It is found and used everywhere from the creation of new materials and processes through to advancements in medical health and diagnosis of disease.

A chemistry-based qualification provides students with the relevant skills and knowledge to open doors in research, medicine, education, industry, finance, consultancy and more.

### Course Code:
TR061

### Places 2017/18:
72

### Degree Awarded:
B.A. (Moderation)

### Degree Type:
Honors Bachelor Degree

### NFQ:
Level 8

### Awarding Body:
Trinity College Dublin, The University of Dublin

`tcd.ie/science`
Trinity is the first and only Irish university to join the prestigious ranks of the League of European Research Universities (LERU).

In the Chemical Sciences Stream students will study the core concepts that are fundamental to all of chemistry including topics in physical, organic and inorganic chemistry. Students will receive a strong grounding in mathematics and will be able to expand their scientific knowledge and to pursue their individual interests by choosing from a cohort of approved and elective modules on topics such as physics, chemical biology, geoscience, history and philosophy of science.

In the third year, students specialize in one of the four moderatorships offered in this stream: Chemistry, Chemistry with Molecular Modelling, Medicinal Chemistry and Nanoscience¹ (the physics and chemistry of advanced materials). Small group teaching from academic experts who are actively researching in these subjects creates an exciting teaching and research-led environment where current state-of-the-art research is discussed together with fundamental concepts.

Students can also experience the wide range of knowledge and investigation available throughout the university by choosing an elective module from a selection that highlights major research themes from across all faculties. In the fourth year students choose from a selection of modules on advanced topics within their discipline. They will also undertake a research project in Trinity or in a research laboratory in another university, research institute or industry partner.

This offers students the opportunity to gain international experience, giving them the choice to pursue their final-year research project abroad. If you want to understand the workings of the world around you, then chemistry is for you!

¹ Students who wish to specialise in Nanoscience can also enter the Physical Sciences stream (TR063).
