

Module Template for New and Revised Modules

Module Code	ME5BIO3
Module Name	Tissue Engineering
ECTS Weighting	5 ECTS
Semester taught	Semester 1
Module Coordinator/s	Prof Daniel Kelly
Module Learning Outcomes with reference to the Graduate Attributes and how they are developed in discipline	<p>On successful completion of this module, students should have an:</p> <p>LO1. Understanding of the fundamental principles of tissue engineering</p> <p>LO2. Understanding of stem cells and animal/human cell culture processes</p> <p>LO3. Awareness of current “state of the art”, emerging technologies and advances in the field</p> <p>LO4. Ability to understand biological processes and apply this knowledge to tissue engineering and regenerative medicine</p> <p>LO5. Ability to integrate the knowledge on biomaterial fundamentals and cell and tissue biology toward the development of biomedical applications</p> <p>LO6. Ability to identify, formulate and adapt engineering solutions to unmet biological needs</p> <p>LO7. Ability to analyse biological systems as engineering systems</p> <p>LO8. Understanding and knowledge of the commercial market and the regulatory hurdles in tissue engineering</p> <p>LO9. Appreciation of ethical issues and considerations for regenerative medicine</p> <p>LO10. Ability to present a complex topic in tissue regeneration to a wide audience</p> <p>Graduate Attributes: levels of attainment</p> <p>To act responsibly - Enhanced</p> <p>To think independently - Enhanced</p> <p>To develop continuously - Enhanced</p> <p>To communicate effectively - Enhanced</p>

Module Content

This module builds upon MEU44BM6/ME5M20 Biomaterials, with the explicit objective to provide students with extensive knowledge on the fundamentals, enabling technologies and applications to generate new tissues through the combination of cells, biocompatible materials and suitable biochemical and biophysical factors to improve or replace biological functions that have been compromised through disease. An overview of contemporary approaches to tissue and cell engineering will be given, including stem cells, cellular signalling, biomaterial scaffolds, use of bioreactors in tissue engineering, and controlled release strategies. Ethical considerations related to clinical application of tissue and cell engineering technology will also be explored. Topics covered include: Stem Cells, Embryogenesis, Cellular Signalling, Extracellular Matrix as a Scaffold, Degradable Biomaterials for Tissue Engineering, Cell-Material Interactions, Scaffold Design and Fabrication, Controlled Drug Release in Tissue Engineering, Bioreactors in Tissue Engineering, Production of Mesenchymal Stem Cells, Industrial Tissue Engineering Manufacturing, Cartilage Tissue Engineering, Bone Tissue Engineering, Cardiovascular Tissue Engineering, Corneal Tissue Engineering and Replacement, Tissue Engineering of the Intervertebral Disc (IVD).

Teaching and Learning Methods

The module is taught using a combination of lectures and assignment. Students are tasked with an independent or group learning assignment to research a specific area in the field of tissue engineering and regenerative medicine which introduces the student to research skills necessary for life-long learning.

Assessment Details Please include the following: <ul style="list-style-type: none"> • Assessment Component • Assessment description • Learning Outcome(s) addressed • % of total • Assessment due date 	Assessment Component	Assessment Description	LO Addressed	% of total	Week due
	Short test	Online/In-class test on lecture material covered in the first 5 weeks	1-5	10	5
	Independent/Group Assignment	Students are tasked with an independent or group learning assignment to research a specific area in the field of tissue engineering and regenerative medicine	1,3,10	15	7
	Written Examination	Timetabled semester 1 examination	1-9	75	End of Semester 1
Reassessment Requirements	Reassessment is a 2hr exam (100%)				
Contact Hours and Indicative Student Workload	Contact hours: 30 lecture hours				
	Independent Study (preparation for course and review of materials): 70 hours				
	Independent Study (preparation for assessment, incl. completion of assessment): 25 hours				
Recommended Reading List	<ul style="list-style-type: none"> ▪ Tissue Engineering, van Blitterswijk & de Boer, 2nd edition, (Elsevier) ▪ Principles of Tissue Engineering, 4th Edition, Lanza, Langer & Vacanti, 2013 (Elsevier) ▪ Tissue Engineering, Palsson & Bhatia, 2004, (Pearson Prentice Hall) 				
Module Pre-requisite	MEU44BM6				
Module Co-requisite	ME5M20 (If MEU44BM6 has not been taken previously)				
COVID contingency plan	If necessary, all lectures will be conducted online and assessments will be a mix of online examinations and continuous assessment.
