MSc in Operations and Supply Chain Management

Launch your career in operations and supply chain with our innovative masters

This programme equips students with the tools and expertise to manage supply chain processes and their connected operations in a global and increasingly digitalised marketplace. Monitoring risk, leveraging innovation and managing collaboration are some of the core themes embedded in this programme.

As well as the solid theoretical expertise gained in the classroom, students will gain first-hand experience working directly with the major digital and financial companies locally. Operations and supply chain management are important areas for businesses to understand in order to deliver their products and services as effectively and efficiently as possible.

“Supply chains exist for every product and service that we consume, directly or indirectly. This programme allows students to develop a strategic and analytical perspective of global, interconnected supply chains and their increasing complexity. There is a strong demand in the marketplace for graduates with the skills and modes of thinking to address key challenges across a variety of business sectors. The programme also embraces contemporary issues such as innovation, risk management and data analytics.”

Sinead Roden, Programme Director
Who can apply for this course?
We don’t require students to have a business degree or any existing knowledge of operations or supply chain. We suggest it’s suitable for students who have an interest in this area and have good quantitative skills.
