

Connecting to the Trinity VPN Service - macOS

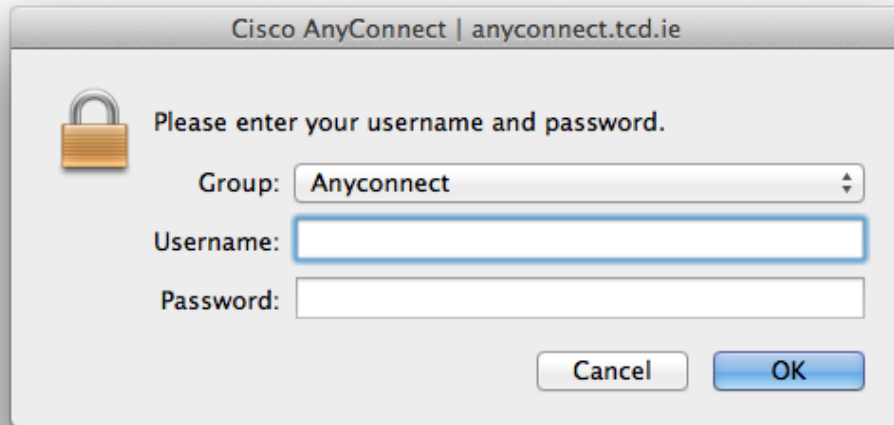

1. To start the Cisco AnyConnect VPN Client go to the **Applications** Folder and then the **Cisco** subfolder. Double click **Cisco AnyConnect Secure Mobility Client**.

2. If the box under 'Ready to connect.' is empty, type in **anyconnect.tcd.ie**. Click the **Connect** button.

3. You will be prompted to enter your Trinity computer account username and network login password. Do so and click OK.

4. Once the connection is established you will see an icon on the top toolbar with a padlock

You will see a similar icon in the dock

You can click and hold the icon in the dock and select options to retain it in dock, if you wish to keep the client launcher handy.

5. To disconnect either click the icon on the top toolbar and select Disconnect:

Or click and hold the icon in the dock and select Disconnect.

Note: Disconnecting the client does not stop the client application from running. You can easily reconnect by selecting the icon again in the top toolbar and selecting Connect.
