

Module Template for New and Revised Modules¹

Module Code	EEU33C05
Module Name	Telecommunications
ECTS Weighting²	5 ECTS
Semester taught	Semester 2
Module Coordinator/s	Dr. Aleksandra Kaszubowska-Anandarajah
<u>Module Learning Outcomes</u> with reference to the <u>Graduate Attributes</u> and how they are developed in discipline	<p>On successful completion of this module, students should be able to:</p> <ul style="list-style-type: none">LO1. Understand key concepts of random processes.LO2. Understand key concepts in information theory (e.g. entropy, capacity of channels).LO3. Apply different compression techniques to data and explain the advantages and disadvantages of the different options.LO4. Apply different channel coding techniques to data and demonstrate the types of error that can be corrected.LO5. Describe and explain a number of analog modulation schemes and calculate bandwidth and power consumption of the different schemes.LO6. Describe and explain a number of digital modulation schemes and calculate BER performance under different conditions.LO7. Design a simple simulation model of an analogue and digital transmitter and receiver.LO8. Understand the basics of wireless and optical telecommunication systems.LO9. Understand the operation principle of the basic components of telecommunication systemsLO10. Explain the trade-offs that can be made in the design of communication system.LO11. Explain the main differences between the different mobile telecommunication standards.LO12. Understand the economic, environmental and social impact of telecommunication.LO13. Understand the health risks associated with the use of technology and how to minimise them.LO14. Work efficiently as a team to solve engineering problems.LO15. Perform experimental evaluation of telecommunication system performance, write technical report describing the work and findings.

¹ [An Introduction to Module Design](#) from AISHE provides a great deal of information on designing and re-designing modules.

² [TEP Glossary](#)

LO16. Understand the social and environmental responsibilities of an individual and the impact of personal lifestyle choices on the wider society.

Graduate Attributes: levels of attainment

To act responsibly - Introduced

To think independently - Enhanced

To develop continuously - Enhanced

To communicate effectively - Enhanced

Module Content

The aim of the module is to introduce students to the theory and applications of telecommunication systems. Topics covered in this module include an introduction to random processes, information theory, data compression, error control coding algorithms and modulation schemes.

Teaching and Learning Methods

Teaching Strategies

The module is taught using a combination of lectures, tutorials and laboratories.

Assessment Mode(s): summative

Assessment Details³

Please include the following:

- **Assessment Component**
- **Assessment description**
- **Learning Outcome(s) addressed**
- **% of total**
- **Assessment due date**

Assessment Component	Assessment Description	LO Addressed	% of total	Week due
written exam	Open-book written exam	Ability to apply knowledge, problem solving	70	36
In Class test (1)	In Class test (1)	Assessment of material covered in first half of module	10	27
In Class test (2)	In Class test (2)	Assessment of material covered in second half of module	10	32

³ [TEP Guidelines on Workload and Assessment](#)

	Lab	Lab	Lab skills, analog and digital modulation	10	22-32
Reassessment Requirements					
Contact Hours and Indicative Student Workload³	Contact hours: 4h/week				
	Independent Study (preparation for course and review of materials): 3h/week				
	Independent Study (preparation for assessment, incl. completion of assessment): 90h
