Module Learning Aims and Outcomes:

This module is designed to introduce students to the principles and methods of quantitative research that, by adopting the scientific method, is concerned with acquiring and testing knowledge about the social through the collection and statistical analysis of measurement data. Good knowledge and training in quantitative research represent a cornerstone of an excellent training in sociology.

Module Content:

In this introductory module, we will learn what quantitative research is about, why it is essential for the scientific progress of our discipline, what are its core elements are, and how we can gather, interpret, and elaborate on evidence in quantitative research. Therefore, an overarching goal of the module is to familiarise students with the different elements and methods employed in the quantitative research process starting from formulating research questions and hypotheses, identifying and crafting a research design, sampling, principles of measurement, methods of data collection in particularly the survey method, the nature of quantitative data and basic tools of analysis. Moreover, students will learn to read and discuss work by quantitative researchers, especially focusing on the lessons they learned and the challenges they faced. The final goal is to help students understand how to move from project design to project implementation, to data analysis and reporting in quantitative research. Students will deepen their knowledge by attending practical tutorial sessions that are accompanying the weekly lectures.
