Development of an Online Property Listing Web Application for an Agricultural Media Company

Abstract

The objective of this project was to design and develop a web based property listing application for an Agricultural Media Company. The project involved identifying the feature requirements of the application as well as developing the application to fulfil these requirements. The application allows users to browse and search the site for property listings as well as place their own listings on the site. The application is also fully responsive allowing it to work across mobile, tablet and desktop devices. It has been developed using the Laravel PHP framework, MySQL, JavaScript, HTML and CSS.
